## HYPERION P-51 RETRACT SERVO INSTALLATION

Installing the retract servo is the most fiddly job in an otherwise straight forward build of the P-51 from Hyperion.

I have found that it's easier to use a retract servo in this Mustang than a micro servo. Here is a picture of how I installed one in my P-51. Its simple and it works.

Please feel free to use my method or the method as outlined in the instructions supplied with the kit.
